## CONFERENCE CHAIR MESSAGE

### **Dr. Vincent W Ho**

“International Conference of Akademika Nusa Internasional ” is a platform that thrives to support the worldwide scholarly community to analyze the role played by the multidisciplinary innovations for the betterment of human societies. It also encourages academicians, practitioners, scientists, and scholars from various disciplines to come together and share their ideas about how they can make all the disciplines interact in an innovative way and to sort out the way to minimize the effect of challenges faced by the society. All the research work presented in this conference is truly exceptional, promising, and effective. These researches are designed to target the challenges that are faced by various sub-domains of the social sciences, business and economics, applied sciences, engineering and technology, health and medical sciences.

I would like to thank our honorable scientific and review committee for giving their precious time to the review process covering the papers presented in this conference. I am also highly obliged to the participants for being a part of our efforts to promote knowledge sharing and learning. We as scholars make an integral part of the leading educated class of the society that is responsible for benefitting the society with their knowledge. Let’s get over all sorts of discrimination and take a look at the wider picture. Let’s work together for the welfare of humanity for making the world a harmonious place to live and making it flourish in every aspect. Stay blessed.

Thank you.

Dr. Vincent W Ho

# The Relationship Among Employees Compensation, Firms Performance, and Corporate Governance

\*Mao-Chang, Wang

Chinese Culture University, Taiwan

Corresponding Email: wmaochang@yahoo.com.tw

---

**Keywords:** Employees Compensation, Firms Performance, Corporate Governance, Taiwanese Enterprises

Compensation system is an important aspect of corporate governance, and is also an important mechanism to eliminate agency problems arising from the separation of ownership and management. Corporate governance is an important mechanism of protecting the interests of stakeholders, and also has a significant influence on the firms performance. Taiwan is currently a lack of integration research literature among employees compensation, firms performance and corporate governance, and causes motives and interests of this paper. This research paper will use samples of Taiwanese listed firms in 2015, and uses the multiple regression model to examine the relationship among employees compensation, firms performance, and corporate governance characteristic. The empirical results show that the positive relationship among employees compensation, firms performance, and corporate governance characteristic. The results will contribute to the field of literature, and valuable reference for the government institutions, practitioners and academics to understand the relationship among employees compensation, firms performance, and corporate governance in Taiwanese enterprises. The results will attract talented person to stay in Taiwan, and enhance the competitiveness of countries, industries and enterprises in the future.

# The Meta-Analysis of Business Model Concept in Task-Based View

<sup>1</sup>\*Ya-hui, Lin, <sup>2</sup>Kung-Wen Wu

**Keywords:** Meta-Analysis, Business Model, Innovative Business

As the popularity of internet and the idea of sharing economic bring about various innovative business notions and products, the application of business model gradually gains attention especially for its usefulness in managing digital economical activities. In the past, there are a lot of researches related to the definition of business models; however, the concept of business models is still lack of agreeable definitions because people have different expectations toward business models and it is hard to integrate all the business model theories for the difference among theoretical perspectives. In our study, a task prospect is adopted to analyze business model concept in the previous researches instead of theoretical perspectives. Through the functional faucets of business models, the conflicts rising from different theoretical prospects reduce due to isolate the instrumental roles. We hope to present business models in a readily understandable way through our effort and hope it can contribute to the following researchers and their further researches in business models.

# Linking The Relationship Among Five Factors Model, Task Performance And Contextual Performance In Insurance Industry

**Keywords:** FFM, Big Five, Task Performance, Contextual Performance, Insurance Sales

Performance is central issue in Industrial/Organizational Behavioral and Human Resource research area (Arvey & Murphy, 1998; Campbell, 2010; Motowidlo, 2003; Rojon, McDowall & Saunders 2015); Viswesvaran & Ones, 2000). Performance has become one of the most explored organizational constructions. A lot of studies focus on the overall job performance (OJP). However, the distinction of task performance and contextual performance has emerged (Borman & Motowidlo, 1993; Borman & Motowidlo, 1997; Motowidlo, Borman, & Schmit, 1997; Motowidlo & Van Scooter, 1994). Also, the research shows that task performance and contextual performance should be considered together, because those components predict overall performance. For the purpose of selecting productive employee, how to identify the person is likely to perform well from a pool of applicants is important issue of selection literatures. How to select the right person for organization is very important issue. One of the predictive for performance is five-factor model (FFM), or Big Five personality traits in the area of for Industrial/Organizational Behavioral and Human Resource research area(e.g., Barrick & Mount, 1991; Tett, Jackson, & Rothstein, 1991). Broad personality inventories, such as comprehensive Big Five representing the FFM, predict performance better than single, narrow measures, especially performance distinction into task performance and contextual performance (Foster & Nicols, 2015; Rojon, McDowall et al. 2015)). The study would like to explore the relationship between the FFM and contextual performance and task performance. Bridge the gap of predictor to precision criteria as task performance and contextual performance from overall job performance. This study also would like, at the same time, to provide the evidence for the practice of selection to recruit, to select the productive person into the organization and to retain the productive employee stay in the company (Furnham and Miller, 1997; Hogan and Foster, 2016)

# A Study on Organization-Based Communities of Practice: A Case Study of Industrial Cluster

\*Wen-Bing Gau

<sup>4</sup>Hokkai Gakuen University, Japan

Corresponding Email: bouchardjeremie@yahoo.com

---

**Keywords:** Communities Of Practice (Cops), Industrial Cluster, Organizational Learning

The concept of Communities of Practice (CoPs) highlights the linkage between varied professional fields, including individual learning, organizational learning and knowledge management. However, most literature referring to the concept of CoPs focused on the individual-based CoPs, while few discussed the CoPs which composed of enterprise organizations to say nothing of looking into the elements of running an organization-based CoP. This study synthesized existing literature and collected successful cases of industrial clusters to explore how the organizations within the clusters interact with each other. The theoretical framework of CoPs proposed Wenger (1998) was adopted to reflect on the individual organizations learning process. The research questions were as follows: A) What are the key factors facilitating the organization-based CoPs? B) How do the above factors work as a whole? The semi-structured interview method and the focus group interview method were adopted. 6 industrial clusters were visited, while 12 interviewees were recruited. In order to understand the whole picture of members interactions within the cluster, the leader and a selected senior member were interviewed in each cluster. The findings support that the organization-based CoPs come to life from the trust derived from members ongoing mutual engagement and the sense of trust is also the key to facilitate 6 factors of running an industrial cluster. The 6 factors, including the key persons guidance, regular gatherings, collaborative learning, shared resources, shared benefit, and professional development, interact with each other so as to create an interactive environment where members mutual engagement, joint enterprise, and shared repertoire can be well developed.

***MEDICAL, MEDICINE AND HEALTH SCIENCES***

# The Effects Of Heliotropium Indicum L. Extract On Uterine Involution In Postpartum Rats

<sup>1\*</sup>Sayah Ongsricharoenbhorn, <sup>2</sup>Panithan Sriboriboon, <sup>3</sup>Sajeera Kupittayanant  
<sup>1,2,3</sup>Suranaree University of Technology, Thailand Corresponding Email: sayah.ongsri@gmail.com

---

**Keywords:** Heliotropium indicum L., Uterus, Involution, Contraction

Involution is the process by which the uterus is transformed from pregnant to non-pregnant state. The uterus in the postpartum period returns size, position in the pelvic cavity, and regains its muscular tone to the pre-pregnant state. Uterine involution needs a contraction of the uterus to prevent postpartum hemorrhage (PPH) that adversely affects the mother and baby. Modern and traditional medicine can be used to help accelerate uterine involution to reduce the risk of PPH. Thai traditional medicine showed that Heliotropium indicum L. (*H. indicum*) could expedite uterine involution. However, there is no scientific data to support this traditional claim. The aims of this research were therefore 1) to study the effects of *H. indicum* on uterine contraction isolated from rats on day 1, 3, 5 after parturition ( $n = 5$  each) by measurement of isometric contraction force using tissue organ bath system. 2) to study the effects of *H. indicum* on uterine weight and size and 3) to study the effects of ethanol extract of *H. indicum* on collagen in the uterus determining by image processing using MATLAB. The rats were separated into 3 groups ( $n = 10$  each) fed with the extract (250 mg/kg.BW for 5 days after parturition) or vehicle; lactating without the extract, lactating with the extract, and non-pregnant rats. The results showed that *H. indicum* significantly increased uterine contraction and significantly decreased uterine size and total collagen. Moreover, *H. indicum* had no toxicity because there were no lethal effects on mother and baby. The findings therefore confirmed traditional uses and revealed that *H. indicum* could accelerate uterine involution.

# Physiological Study Of *Thunbergia Laurifolia L.* On Gestational Diabetic Rat Uterine Contraction

<sup>1\*</sup>Sasitorn Kerdsuknirund, <sup>2</sup>Sajeera Kupittayanant<sup>2</sup><sup>3</sup>Sajeera Kupittayanant  
<sup>1,2,3</sup>Suranaree University of Technology, Thailand Corresponding Email: [sasi.kerdsuknirund@gmail.com](mailto:sasi.kerdsuknirund@gmail.com)

---

**Keywords:** Myometrial Contractility, Gestational Diabetes, *Thunbergia Laurifolia L.*, Organ Bath Apparatus

Poor myometrial contractility may be an important factors found in pregnancies complicated diabetes which are related to reduced Ca<sup>2+</sup> channel expression and intracellular Ca<sup>2+</sup> signaling. *Thunbergia laurifolia L.* has been studied for an antidiabetic potential in Thai traditional for treating diabetes. However, the effects of this plant on myometrium contractility have never been investigated. The aims of this study were to demonstrate the uterine contractile responses patterns and the possible effect of *T. laurifolia* crude extract on uterine contraction in diabetes pregnant rats. Pregnant rats were randomly divided into non-gestational diabetic rats (non-GD) and gestational diabetic rats (GD). Diabetic induction was performed by 60 mg/kg of streptozotocin i.p. administration on gestation day 5. At term (gestation day 20), all rats were sacrificed by CO<sub>2</sub> asphyxia. The uterus was removed. Longitudinal myometrium strips were dissected and immersed in the organ bath apparatus containing physiological Krebs solution. For tension measurement, spontaneous contraction during 30 minutes record was served as control and compared with the application of high K<sup>+</sup> depolarization (KCL), oxytocin (OT), or *T.laurifolia* crude extract. Results of spontaneous contractions showed that the frequency, amplitude and area under the contraction in GD were significantly decreased, but duration was prolonged when compared with non-GD. Similarly, the response to KCL and OT were significantly decreased in GD when compared with non-GD. Interestingly, the application of *T. laurifolia* crude extract significantly inhibited spontaneous uterine contractility in both Non-GD and GD. However, this inhibition effect was greater in non-GD when compared with GD. In conclusion, the results showed that gestational diabetes reduced of myometrium contractility that *T. laurifolia* crude extract can reduce uterine contraction in both non-GD and GD. The treatment of *T. laurifolia* crude extract may be helpful for preventing miscarriage or preterm birth which is commonly found in pregnancies complicated diabetes.
