## CONFERENCE CHAIR MESSAGE

**Dr. Vincent w Ho**

“International Conference of Akademiika Nusa Internasional ” is a platform that thrives to support the worldwide scholarly community to analyze the role played by the multidisciplinary innovations for the betterment of human societies. It also encourages academicians, practitioners, scientists, and scholars from various disciplines to come together and share their ideas about how they can make all the disciplines interact in an innovative way and to sort out the way to minimize the effect of challenges faced by the society. All the research work presented in this conference is truly exceptional, promising, and effective. These researches are designed to target the challenges that are faced by various sub-domains of the social sciences, business and economics, applied sciences, engineering and technology, health and medical sciences.

I would like to thank our honorable scientific and review committee for giving their precious time to the review process covering the papers presented in this conference. I am also highly obliged to the participants for being a part of our efforts to promote knowledge sharing and learning. We as scholars make an integral part of the leading educated class of the society that is responsible for benefitting the society with their knowledge. Let’s get over all sorts of discrimination and take a look at the wider picture. Let’s work together for the welfare of humanity for making the world a harmonious place to live and making it flourish in every aspect. Stay blessed.

Thank you.

Dr. Vincent w Ho

**Keywords:** Discretionary Accruals, Supply Chain CPA, Corporate Social Responsibility, Life Cycle

This study examines the corporate social responsibility (CSR) performance of listed companies in Taiwan by looking at how companies meet their CSR obligations and by exploring how employing supply chain certified public accountants (CSRSCPAs) affects the quality of their earnings. This study's results show that the inclusion of different supply chain streams reveal that upstream CSRSCPA are more likely than middlestream and downstream CSRSCPAs to receive favorable reactions from market participants. This is an indication that market participants are impressed by the specific expertise and knowledge of these professionals. Furthermore, maturity companies are more likely than growing ones to receive favorable reactions from market participants when CSRSCPA are upstream.

# Liquidity Operations During the Financial Crisis 2007/08: Evidence from the Relations Between Korean Won Onshore and Offshore Markets

\* Helen Ghebrezghi

University of Siegen, Germany

**Keywords:** Non-deliverable Forward, Liquidity, Spillover Effect, GARCH Model

This paper addresses the interrelation of onshore and offshore markets before and after South Korea's Central Bank or Bank of Korea (BOK) responded to the financial crisis of 2007/2008. During the financial crisis, Korea faced a liquidity crunch and leveraged their high level of reserves to conduct liquidity operations e.g. swap agreements in late 2008. To analyse how the reforms affected the mean and volatility spillover in between the spot and NDF markets, an extended GARCH model was used. The main findings of this paper are that prior to the financial crisis, the won spot market dominated the offshore market, which means that this lack of information flow benefited the BOK to independently form monetary policy, e.g. setting interest rate and exchange rate policy. This changed after South Korea addressed the won's liquidity crunch at the height of the crisis. Mean and volatility spillover between the markets has diminished and the pricing gap has narrowed, outcomes which hold to the efficient market hypothesis. In addition to the empirical results, this paper also underlines the significance of liquidity and robust capital requirements for central banks.

# Characteristics of Learning Outcomes and Behavioral Changes in Virtual Reality (VR): Focused on Learning Motivation, Immersion, Public Self-Consciousness

\* Jongseo-Won

The Graduate School of YONSEI University MOT Graduate, Korea

**Keywords:** VR (Virtual Reality), HMD (Head Mounted Display), Edu-Tech, HMD VR

Virtual reality connects virtual reality and reality, and is utilized for various purposes in terms of consumer and producers. In particular, there is a study focused on learning how to induce learners to change the behavior of students in the field of learning, especially in the field of learning, which is a positive effect on learning motivation, immersion, and performance. However, traditional studies have mainly used VR initialization devices, which require recent studies in the latest device situations as the HMD (wearable device) VR is enlarged. This study conducted experiments in HMD VR and Tablet PC learning environments to analyze differences in device characteristics according to this technological evolution. Experimental designs were selected for 20 students who were in the mid - 20s and early - 40s who had experience using tablet PC and HMD - based VR more than once. The method was conducted within the subject design method (within subject design) The Results showed that Immersion and learning motivation had a significant effect on learning outcomes, but Public self - consciousness did not have a Moderate effect on Immersion, learning outcomes, learning motivation and learning outcomes. The Levene test result showed a significance level of 0.05 or more, and the significance of the t-value of the equally divided assumptions was found to be less than 0.05 in each construct. Therefore, Immersion, Public Self-Consciousness, Learning Motivation Is more positive than Tablet PC.

# An Elaboration on the Nature and Prospects of Modern Psychology

\*Behrouz Panjali

Islamic Azad University, Tabriz, Iran

---

**Keywords:** Modern Psychology, Psychologists, Models of Behavior, Mental Processes

Modern psychology is divided into several sub-disciplines, each based on differing models of behavior and mental processes. In recent years a number of new fields of psychology have emerged. Industrial/organizational psychology, emerging from social psychology, focuses on the workplace and considers such topics as job satisfaction, leadership, and productivity. Health psychology examines how psychological factors contribute to pathology, and demonstrates how psychology can contribute to recovery and illness prevention for such somatic disorders as heart disease, cancer, and diabetes. In environmental psychology, research focuses on how individuals react to their physical environments, and suggests improvements which may be beneficial to psychological health. Other new areas of psychology include counseling psychology, school psychology, forensic psychology, and community psychology. Psychology Perspectives by Saul McLeod published 2007. There are various different approaches in contemporary psychology. An approach is a perspective (i.e. view) that involves certain assumptions (i.e. Beliefs) about human behavior: the way they function, which aspects of them are worthy of study and what research methods are appropriate for undertaking this study. There may be several different theories within an approach, but they all share these common assumptions. You may wonder why there are so many different psychology perspectives and whether one approach is correct and others wrong. Most psychologists would agree that no one perspective is correct, although in the past, in the early days of psychology, the behaviorist would have said their perspective was the only truly scientific one. Each perspective has its strengths and weaknesses, and brings something different to our understanding of human behavior. For this reasons, it is important that psychology does have different perspectives to the understanding and study of human and animal behavior.

# Distinguishing Design Research and Practice in Business Context

\* Sun Jian

Beijing Institute of Technology, China

Corresponding Email: jeffrey.imagine@gmail.com

---

**Keywords:** Design Activities, Documentary Analysis, Business Innovation

Design has been regarded a practice for hundreds of years. Making things is one of the attributes that made human in the first place (Ken Friedman, 2000). Nowadays design is regarded as an important strategy and design professionals are playing a more strategic role in innovation performance of organizations. However, the overlapping understanding between design research and practice extends in the field of strategic design and it is demanding to identify. The paper is organized as follows. Firstly, background of design strategy is introduced to illustrate the landscape of adopting design approaches in innovation strategies. Then practice theory is utilized to demonstrate design activities in business context. A method of documentary analysis is used to collect the data. The paper contributes to understanding of design within organizations by identifying research and practice activities, drawing on theories of practice.

# Why Does it have to be BUGs?

**Keywords:** Insect farming, Korea, UN, FAO

Experts estimate that the increasing number of global population will reach nine billion by 2050. Regarding this issue, it is no doubt that the humankind needs alternative energy, workforce, and most importantly, food source. UN Food and Agriculture Organization (FAO) presented the model of insect farming as a plausible yet definite solution for this problem. However, as I read through their analysis they only covered the surface of the insect farming not describing any microscopic information which made me to write this paper. This paper mainly focuses on the potential and challenges of insect farming and how this can contribute to Korean food supply. The global trend and the prospects will be elaborated through numbers and graphs. The benefits will be suggested through four steps analysis, backed up by real-life examples. The challenges will be introduced with two perspectives divided globally and domestically. Finally, the connections of distinguished attribute of Korea and insect farming will show how effectively it can support Korean food supply.

# **Financial Regulation as moderating, Influence of Corporate Governance, Institutional Quality, Human Capital and Firm Size on Financial Institutions Performance in Kenya**

\* Charles Ndalum Wasike

School of Business, Jomo Kenyatta University of Agriculture and Technology

Corresponding Email: ndaluwasike2006@yahoo.com

---

**Keywords:** InsecCorporate Governance, Institutional Quality, Financial Performance, Human Capital, Financial Regulation & Firm Size.

This paper provides new evidence that sheds light on the influence of corporate governance, institutional quality, human capital and firm size on financial institutions performance in Kenya based on sampled data from 236 financial institutions during 2006-2012. Also, this research is to find out whether the financial regulations could moderate the relationship among the influence of corporate governance, institutional quality, human capital and firm size on financial institutions performance in Kenya. Stratified sampling was adopted to obtain samples from the heterogeneous financial services sector. Primary data was collected through self-administered questionnaires to the managers of the various financial institutions. Analysis of data was conducted using Analysis of Variance (ANOVA), Multiple Regression and Correlation Analyses. A multivariate functional relationship expressed the relationship. The study aimed at assisting academics and policy makers craft policies that could promote financial sector development in Kenya considering the projected contribution the sector is poised to make towards economic growth as envisioned in vision 2030. The data analysis results demonstrated that corporate governance, institutional quality, human capital and firm size are statistically significant determinants of financial sector performance in Kenya.

**Keywords:** Magnetic Abrasive Finishing, Microscale-Diameter Wire Material, Rotating Magnetic Field, Unbonded Magnetic Abrasive Type, Surface Roughness, Removed Diameter.

This paper proposes a new magnetic abrasive finishing process of microscale-diameter wire material which it is considered difficult to achieve by conventional finishing process. The processing method uses assistance of a rotating magnetic field system with unbonded magnetic abrasive type. This process is considered to be able to efficiently adopt in finishing technique for producing the smooth surface and removing diameter of wire material. In this study, we describe the development of magnetic abrasive finishing technique of microscale-diameter wire material, and clarifying the effective of significant process parameter on improvement of surface roughness and removed diameter, namely rotational speed of magnetic field, vibrational frequency of wire workpiece, and unbonded magnetic abrasive grain size. The experimental results show that the surface roughness of wire material improved from 0.25 $\mu$ m to 0.02 $\mu$ m for 60sec at 800rpm of rotational speed. Also, in terms of removed diameter, the performance was excellent. As the result, it is successfully adopted a magnetic abrasive finishing of microscale-diameter wire material using assistance of a rotating magnetic field with unbonded magnetic abrasive type.
